DOCTOR WHO

'THE MUTANTS'

Doctor Who and Jo Grant are working in the Doctor's laboratory when a mysterious box materialises before them.

The Doctor explains that this is a dispatch box from the Time Lords, of a kind only used in dire emergencies. He must deliver it to the person, or creature, for whom it is intended. Jo and the Doctor enter the Tardis which dematerialises.

They arrive on Skybase One, a giant space station in orbit round the planet Solos, many hundreds of years in the future. Although a part of Earth's empire, Solos is on the verge of gaining independence. Jo and the Doctor encounter the Marshal, the cruel and despotic ruler of Skybase and hence of the planet Solos. Also present on Skybase, are Ky, a young Solonian revolutionary, and Varan, a native supporter of the Marshal's regime. They have been summoned to Skybase for a conference with the Administrator, a top-ranking Earth official. However, during the conference, the Administrator is murdered by a Solonian native.

(In fact the murder has been engineered by the Marshal who does not wish Solos to be given independence. He then imposes Martial Law on Solos. With the help of Jaeger, the Marshal plans to 'oxygenise Solos', making its high-nitrogen atmosphere suitable for human beings but unsuitable for the native Solonians. This will give the Marshal an Earth-type planet which he can colonise and rule.

The mysterious plague of mutations which is turning the Solonians into strange monster-like creatures is used by the Marshal as a justification of his actions, although Ky says the plague is caused by pollution brought from Earth.

In the confusion following the death of the Administrator Ky, unjustly accused by the Marshal of the murder escapes back onto Solos, taking Jo with him as a hostage.

The Doctor follows and finds Jo and Ky in the disused thaesium mines. There, he also encounters Professor Sondergaard, a human scientist driven into exile by the Marshal's regime. Sondergaard has been living amongst the Mutants trying to find a cure for their disease.

The Marshal and his guards come in pursuit of Jo and the Doctor. They blow up the mine entrances and flood the caves with gas, Jo and Ky, together with Stubbs and Cotton, two of the Marshal's guards who have become their friends, escape to the surface. The Doctor insists on staying in Sondergaard's underground laboratory to study the problems of the Mutants.

Jo and the others escape to the surface where they are made prisoners by Varan who has turned against the Marshal. He insists that they accompany him on his attack on Skybase. Meanwhile, in the caves the Doctor and Sondergaard come close to discovering the secret of the mutations, when they find a mysterious cave filled with glowing radioactive rock.

Varan's attack on Skybase fails. He is killed, Jo, Ky, Stubbs and Cotton are made prisoners.

The Doctor and Sondergaard now making their way back to Skybase are hunted by the Marshal's guards and have to split up.

The Doctor reaches Skybase but he too is made a prisoner of the Marshal. Using Jo as a hostage the Marshal forces the Doctor to work with Jaeger in speeding up the oxygenisation of Solos. Jaeger's early experiments have gone badly wrong and the whole planet is in danger of contamination.

The Doctor is also forced to 'white-wash' the Marshal before the tribunal of the Investigator who has been sent from Earth to check up on the Marshal.

Proceedings are disrupted by the arrival of Sondergaard who leads surviving mutants in an attack on Skybase. This attack too, is defeated and the Marshal uses the opportunity to regain command of the base.

While the Doctor works with Jaeger on the oxygenisation of Solos, the Marshal holds his friends prisoner in Skybase Radiation Room. To their horror the radiation affects Ky who begins to mutate before their eyes. Sondergaard gives Ky a serum which he and the Doctor have prepared from a crystal found in the radiation cave on Solos.

The Doctor deliberately sabotages his experiment and the Marshal is about to kill him. The situation is saved by the arrival of Ky who has now mutated into a kind of super being with unearthly powers. The mutations are a natural part of the Solonians life cycle. They had been triggered off too early by the Marshal's experiments with the atmosphere of Solos. Now that Ky has achieved a successful mutation, he and Sondergaard can help the rest of the Solonians to achieve their destiny.

Jo and the Doctor return to the Tardis and slip away.)
